

ABSTRACT OF THE DISCLOSURE

The invention provides a liquid crystal display apparatus having a flexible substrate that realizes the bright and high quality display. A liquid crystal display apparatus 1 in which a liquid crystal layer 30 is interposed between a pair of flexible substrates 10 and 20 that are faced each other, and many concave faces having the inner surface that is a part of the spherical surface are formed continuously on the surface of the substrate 10 that is facing to the liquid crystal layer 30 side is employed.
